## **DETAILED ACTION**

### **Restriction/Election Requirement**

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-31 and 34, drawn to a method and system for modeling complex formation between a query ligand and a target macromolecules, classified in class 702, subclass 19.
- II. Claims 32-33, drawn to a database, classified in Class 707, subclass 1.

The inventions of groups I-II are independent/distinct, each from the other because of the following reasons:

The inventions of group I and group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the invention of group I is drawn to a method for modeling a complex formation between a ligand and a target macromolecule comprising providing a structural model of a ligand and target, identifying substructures thereof, mapping spatial relationships between the substructures, etc. and generating one or more models, whereas the invention of group II is drawn to a database comprising a first class of records for which the 3-D spatial positions of atoms of each model are determined by a physical observation and a second class of record produced by a method similar to group I. While a part of the database comprises records produced by the method of group I, the database of group II is not disclosed as capable of use together with the method of group I.

Because these inventions are independent/distinct for the reasons given above and have different classifications, they have different fields of search. Searching the database of group II includes searching all the records comprising 3D models determined by physical observations. Thus, the searches for the two groups are not coextensive, and there would be a serious search burden if they were examined together. Therefore, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
